Job Application for Machine Learning Engineer

Dear Tracy Parks

About Me

Canadian born and raised, with a growth mindset and an eagerness to learn has shaped me into the Machine Learning Engineer I am today. A curiosity to innovate and design paired with a strong work ethic has separated me from my peers as a disciplined, quick learner, coupled with elite soft skills. Backed with a strong knowledge of machine learning algorithm development and a curiosity to learn, I design, develop, program, and implement machine learning algorithms for time series applications.

Why Google?

As a child, I fell in love with Google and its mission to freely share information to the masses. Utilizing Google and Youtube helped me develop strong self-teaching abilities, as well as the capability to build businesses. Being eager to solve my ideas harnessing complex information at a young age that were not available to be taught in school, Google and its products helped me. As Google continues to evolve its business units to include more applications and products, I am excited, much like I was as a child, at the possibilities available for Machine Learning Engineers to influence our next generation of youth.

Why Me?

Coming from a "non-traditional" background as a Machine Learning Engineer, I harnessed my diversity to become an expert in Program Management, creating effective solutions for industrial automation and IT problems. Over the course of my Master's in Computer Process Control Engineering, I gained a strong familiarity in software development and coding, winning 3 International Hackathons, as well as having a 6 month-exchange at the MIT of China, Tsinghua University. While at Tsinghua University, I published one research paper, on a novel machine learning algorithm, and went from having no background in Chinese to being an Intermediate Chinese Speaker and writing my HSK 3 exam in 5 months of studying; demonstrating my ability to quickly absorb, learn, and apply information.

Sincerely,

Dave Scott
